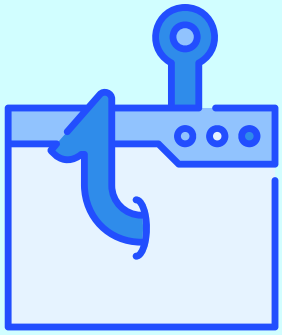
A UNI STUDENT'S CYBERSECURITY SURVIVAL GUIDE: 4 QUICK TIPS YOU SHOULD DO TO PROTECT YOUR UNI (CYBER) LIFE

01.

Don't Trust "Free" Wi-Fi

Never log into your bank or student portal on open cafe Wi-Fi. Always connect to the official Eduroam network while on campus, as it provides encrypted, secure access. If you are off-campus, use a VPN or your phone's personal hotspot for sensitive transactions.



Beware of the "Fake Job" Phishing Trap

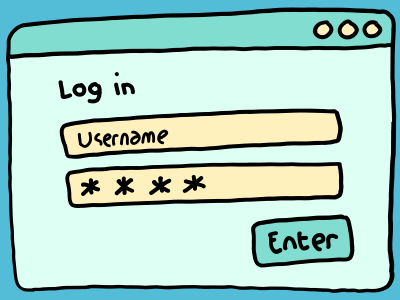
Scammers love targeting student inboxes. If you get an unsolicited email to your student address offering a high-paying, remote part-time job that requires you to buy your own equipment first, it is a scam. Never click links or download attachments from unknown senders.

02.

03.

Physical Security is Cyber Security

A password won't protect your laptop if someone physically walks away with it. Never leave your laptop, phone, or hard drive unattended in the library (even for a quick bathroom break). Always lock your screen (Windows Key + L or Ctrl + Cmd + Q) when stepping away.



Stop Reusing Passwords!

If the password for your student portal is the same one you use for TikTok, Spotify, and your bank, you are one data breach away from a disaster. Use a free Password Manager (like Bitwarden) to generate and store unique, complex passwords for every single account.

04.
